                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sichissoe, S. Submitted to the EMBL Data Library, February 1996
A.Description: The sequence of C. elegans cosmid C33F10.
A.Reference number: Z18397
A.Accession: T15753
A.Accession: T15753
A.Accession: T18763
A.Molecule type: DNA
A.Molecule type: DNA
A.Residues: 1.182 <CHI>A.Cross_references: EMBL:U49830; NID:g1203933; PID:g1203943; PIDN:AAA93401.1; CESP:C33F1

EMBO J. 10:3343-3349[1991).
-!- FUNCTION: ESSENTIAL FOR THE CONTROL OF THE CELL CYCLE AT THE G2/M
-!- SUBJUNT: TRANSITION.
-!- SUBJUNT: INFERACTS WITH THE CDC2 PROTEIN KINASE TO FORM A
SERINE/THRENINE KINASE HOLODMZYME COMPLEX ALSO KNOWN AS
WATURATION PROMOTING FACTOR (MFF). THE CYCLIN SUBJUNT IMPARTS
SUBSTRATE SPECIFICITY TO THE COMPLEX.
-!- DEVELOPMENTAL STAGE: ACCUMULATES STEADILY DURING G2 AND IS
ABRUPTLY DESTROYED AT MITOSIS.
-!- SIMILARITY: BELONGS TO THE CYCLIN FAMILY. CYCLIN AB SUBFAMILY.

Biol. Chem. 261:11680-11685(1986).
-!- FUNCTION: THIS IS ONE OF THE CHAINS OF THE NONENZYMATIC COMPONENT (CF(0) SUBUNIT) OF THE MITOCHONDRIAL ATPASE COMPLEX.
-!- SUBCELLULAR LOCATION: MEMBRANE-BOUND.
-!- SIMILARITY: BELONGS TO THE ATPASE PROTEIN 8 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Nature 409:1007-1011(2001).

-!- FUNCTION: KEX COMPONENT OF THE PROTON CHANNEL; IT MAY PLAY A
DIRECT ROLE IN THE TRANSLOCATION OF PROTONS ACROSS THE MEMBRANE.
-!- SUBUNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC
CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE
SUBUNITS: ALPHA(3), BETPA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0)
HAS THREE MAIN SUBUNITS: A, B AND C.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-!- FUNCTION: BINDS TO THE FC REGION OF IMMUNOGLOBULINS EPSILON. HIGH
AFFINITY RECEPTOR. RESPONSIBLE FOR INITIATING THE ALLERGIC
RESPONSE. BINDING OF ALLERGEN TO RECEPTOR-BOUND IGE LEADS TO CELL
ACTIVATION AND THE RELEASE OF MEDIATORS (SUCH AS HISTAMINE)
RESPONSIBLE FOR THE MANIFESTATIONS OF ALLERGY. THE SAME RECEPTOR
ALSO INDUCES THE SECRETION OF IMPORTANT LYMPHOKINES.

-!- SUBUNIT: TETRAMER OF AN ALPHA CHAIN, A BETA CHAIN, AND TWO
DISULFIDE LINKED GAMMA CHAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           REACTION WHICH INTITATES FATTY ACID STRTHESIS AND MAY THEREFORE PLAY A ROLE IN GOVERNING THE TOTAL RATE OF FATTY ACID PRODUCTION. POSSESSES BOTH ACETOACETYL-ACP SYNTHASE AND ACETYL TRANSACYLASE ACITYTIES (BY SIMILARITY).

CATALYTIES (BY SIMILARITY).

CARRIER PROFEIN] = 3-OXOACYL-[ACYL-CARRIER PROTEIN] + MALONYL-[ACYL-CARRIER PROTEIN] + CO(2) + PATHWAY: FATTY ACID BIOSYNTHESIS.

SIMILARITY: BELONGS TO THE FABH FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

"Molecular cloning of the hamster CMP-sialic acid transporter.";
Eur. J. Biochem. 248:187-122(1997).
-!- FUNCTION: TRANSPORT CMP-SIALIC ACID FROM THE CYTOSOL INTO GOLGI
VESICLES WHERE GLYCOS/LTRANSFERASES FUNCTION (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. GOLGI.
-!- SIMILARITY: BELONGS TO THE NUCLEOTIDE-SUGAR TRANSPORTER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE-96353858; PubMed-875516; Eckhardt M., Muchlenhoff M., Betha A., Gerardy-Schahn R.; Expression cloning of the Golgi CMP-sialic acid transporter."; Proc. -!- EUNCTION: COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE
COMPLEX (COMPLEX III OR CYTOCHROME B-C1 COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL
COUPLED TO APP SYNTHESIS (BY SIMILARITY).

-!- COFACTOR: TWO HEME GROUPS (BS62 AND B566) WHICH ARE NOT COVALENTLY
BOUND TO THE PROTEIN (BY SIMILARITY).

-!- SUBUNIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
CYTOCHROME C1 AND THE RIESKE PROTEIN (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE CYTOCHROME B/B6 FAMILY.

The DC-STAMP is useful in forensic sciences, e.g. to distinguish rodent from human or as a marker to distinguish between different cells exhibiting differential expression or modification patterns. The DC-STAMP and its antibodies are used for preparing kits for use in molecular biology, immunology or physiology, and in treatment of conditions associated with abnormal physiology or development, e.g. allergic conditions (asthma), cancer and autoimmune diseases (diabetes mellitus). Drug screening using DC-STAMP or its fragments can be performed to identify compounds having binding affinity to or other relevant isolation effects on the function of DC-STAMP. The DC-STAMP can also be used in diagnostic kits and methods for detecting the presence of another DC-STAMP or binding partner.

AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB8744 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumnours, footal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
              parkinsons's disease), continue disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, ampiogenic disorders, times disorders, and infections. Prepared disorders, endocrine disorders, and infections. The proteins can also be used to aid wound sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and indiagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunoscorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; negnancy-related disorder; endocrine disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy;

AAD08345-AAD08394 represent cDNAs corresponding to 50 human secreted brotein genes and AAE03898-AAE03947 represent the proteins they encode. AAE03348-AAE03964 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing the amount of the new protein in a sample or by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the include developing products for the diagnosis or treatment of and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, prequancy related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healthing and epithelial cell proliferation, for prevent skin aging due to culture of primary tissues, to regenerate tissues, to identify their constant ligands or binding partners, and in chemotrasis, and in the constants is and the proporting constants in a single proporting constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      87 LSCGLREGRNALIAAGTGIVILGHVENIFHNFKGLLDGMTCNLRAKSFSIHFPLLKKYIE 146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            207 LSSLGQKLLAFAGLSLVLLGTGLFMKRFLGPCGWKYENIYITRQFVQFDERERHQQRPCV 266
